

Enabler Satellite

HOW DO WE HELP YOU SUCCEED?

WWW.ENABLR.TECH

Unlimited reach, performance and diversity in your network.

Enabler Sat delivers seamless, high-availability connectivity anywhere on Earth by combining LEO and GEO satellite networks with local earth-station routing. It ensures traffic can terminate locally for secure internet breakout or direct corporate access, supporting mission-critical use cases from oil rigs and maritime vessels to remote offices and emergency response teams. With intelligent path selection, low latency, and local breakout capability, Enabler Sat empowers enterprises to stay connected, productive, and resilient — no matter how remote their operations.

We've mastered technology, so you don't have to.

Take the next step toward a smarter, more resilient network.

Partner with Enabler today and let our certified team help you unlock efficiency, win back time, and build certainty into your operations.

Performance

EnablerSat delivers enterprise-grade performance through LEO or GEO satellite architecture, ensuring high throughput, low latency, and resilient connectivity even in the most remote environments. By leveraging intelligent path selection and local earth-station routing, traffic is optimised for speed and reliability.

Lower Costs

EnablerSat reduces total connectivity costs through local caching, acceleration, and intelligent data routing. Built-in compression and protocol optimisation further lower bandwidth consumption, while selective breakout to local internet gateways ensures that only essential corporate traffic traverses the satellite link. The result is a leaner, more efficient network that delivers premium performance without premium cost.

Concierge

Beyond technology, EnablerSat offers a concierge-style service experience — a single point of contact for design, deployment, and ongoing optimisation. Customers benefit from proactive monitoring, tailored SLAs, and hands-on support that adapts to operational realities. Whether integrating with existing SD-WAN frameworks or scaling across multiple sites.

Benefits

- **Global coverage:** reliable connectivity anywhere, from offshore rigs to rural sites.
- **Resilient performance:** dual-orbit (LEO + GEO) ensures uptime and reliability.
- **Reduced latency:** local earth-station termination speeds up real-time traffic.
- **Lower operating costs:** caching, compression, and breakout reduce bandwidth spend.
- **Operational certainty:** consistent service quality across diverse environments.
- **Concierge support:** proactive monitoring, tailored SLAs, and single-point accountability.
- **Quick deployment:** rapid installation and activation to get sites online faster.

Features

- **LEO and GEO integration:** flexible deployment for coverage and performance.
- **Local Earth Station breakout:** route traffic to the internet or corporate sites.
- **Intelligent path selection:** dynamic routing for speed and efficiency.
- **Protocol optimisation:** compression and acceleration improve application performance.
- **Secure access:** encryption and unified policy control protect every connection.
