

Perimetre Security

HOW DO WE HELP YOU SUCCEED?

WWW.ENABLR.TECH

A resilient layered protection fabric that keeps threats from your business.

Enabler Guardian Perimeter Security delivers high-performance, multi-layered defence at the network edge — safeguarding data centres, branch offices, and cloud workloads against evolving threats. Built on carrier-grade firewall and intrusion prevention technologies, it ensures traffic is inspected, filtered, and secured in real time. Whether defending against volumetric DDoS attacks, advanced malware, or zero-day exploits, Guardian Perimeter Security empowers organisations to stay resilient, compliant, and agile across complex environments.

Entrusting your perimeter security to Enabler means choosing more than technology — it means partnering with a team that designs, maintains, and

evolves your defences with precision and care.

Firewalls alone are commodities; the true advantage lies in how they are architected around your business, monitored continuously, and supported without compromise. Enabler's 24/7 Managed Services and Security Operations Centre delivers that advantage, combining rapid incident response, proactive patching, and expert on-site or remote support with a holistic approach to security posture management. From firewalls to network detection and response, endpoint protection, and cloud security, we orchestrate layered resilience that keeps threats far from what drives your business.

TECHNOLOGY AGNOSTIC

Enabler is brand-agnostic, focused on delivering service excellence through certified experts. We support leading perimeter security platforms across the industry, ensuring customers can retain existing investments or deploy new solutions with confidence.

A SINGLE PANE OF GLASS, UNIFYING CONTROL

Guardian Perimeter Security provides a unified dashboard for managing firewall policies, intrusion detection, and secure remote access. This single pane of glass simplifies oversight, accelerates response, and builds confidence in perimeter defense.

Self/Co-Managed

Customers can retain hands-on control of firewall rules and monitoring while benefiting from Enabler's specialists as an extension of their team. This model suits organisations that want visibility and influence over perimeter policies but also value expert guidance.

Enabler Managed

For simplicity and certainty, Enabler offers a fully managed perimeter security service. Our certified staff take responsibility for design, deployment, monitoring, and ongoing optimisation — ensuring secure, high-performance protection across all environments.
